

IN THE ABSTRACT:

Please amend the Abstract as follows:

~~The present invention relates to a~~ A portable videodisc player for videodisc with a screen which ~~can~~ is axially and upwardly rotatable ~~rotate in upturn and/or turn around~~. The player has a screen, which ~~can rotate~~ is rotatable within 180 degrees relatives respectively to the vertical axes and the horizontal axes ~~of its main body respectively~~. The player has a main body having a disc driver ~~means~~ and a disc information read/processing meansprocessor, and a display cover board having a screen. ~~There is an~~ An upturn hinge ~~means~~ is found at an edge of the main body and an edge of the display cover board. A cable connects ~~between the main body and the display cover board~~. The main body of the upturn hinge ~~means for upturn~~ is a T-shaped cannula. ~~The~~ A horizontal end of the cannula is fixed on the side of the display cover board and is a shaft having a damper. ~~The~~ A vertical end is used as a rotation shaft which is mounted on the main body. A cable ~~aecross~~ passes through the inner hole of the main body of the upturn hinge ~~means to make~~ connect the main body of the player and the display cover board ~~connected~~. ~~It can make a user upturn and/or rotate the display cover board randomly at a bus, a train or a ship and so on, with regardless of the limitation of space. It may obtain a better effect.~~
